

**Amendments to the Specification**

Please replace paragraph [0019] of the specification with the following amended paragraph:

[0019] The heat accumulation tank mounting member 30 has a band (i.e., a band-shaped bracket) ~~[[21]]~~31. The heat accumulation tank mounting member 30 also has a bracket 32. The band 31 extends around substantially the entire periphery of the tank main body 10 in the circumferential direction of the tank main body 10, and is cut in one location on its periphery. A flange is formed on both ends of the band. The tank main body 10 is pressed inward in the radial direction via the elastic member 39 by tightening a bolt 33 that secures the two flanges together.
